Ansible Automation Platform and  
OpenShift Advanced Cluster Management

**– integration that matters**

In today's IT world, the question isn't  
'IF' you should **automate**,  
but 'WHEN' and 'WHAT' you'll  
**start winning** by doing it.

# Many organizations **share the same challenge.**

# An integrated **Automation Platform** for your company

Turn your automation expertise into Ansible content with AI

## CODE ASSISTANT

Ansible-specific code generation service to:

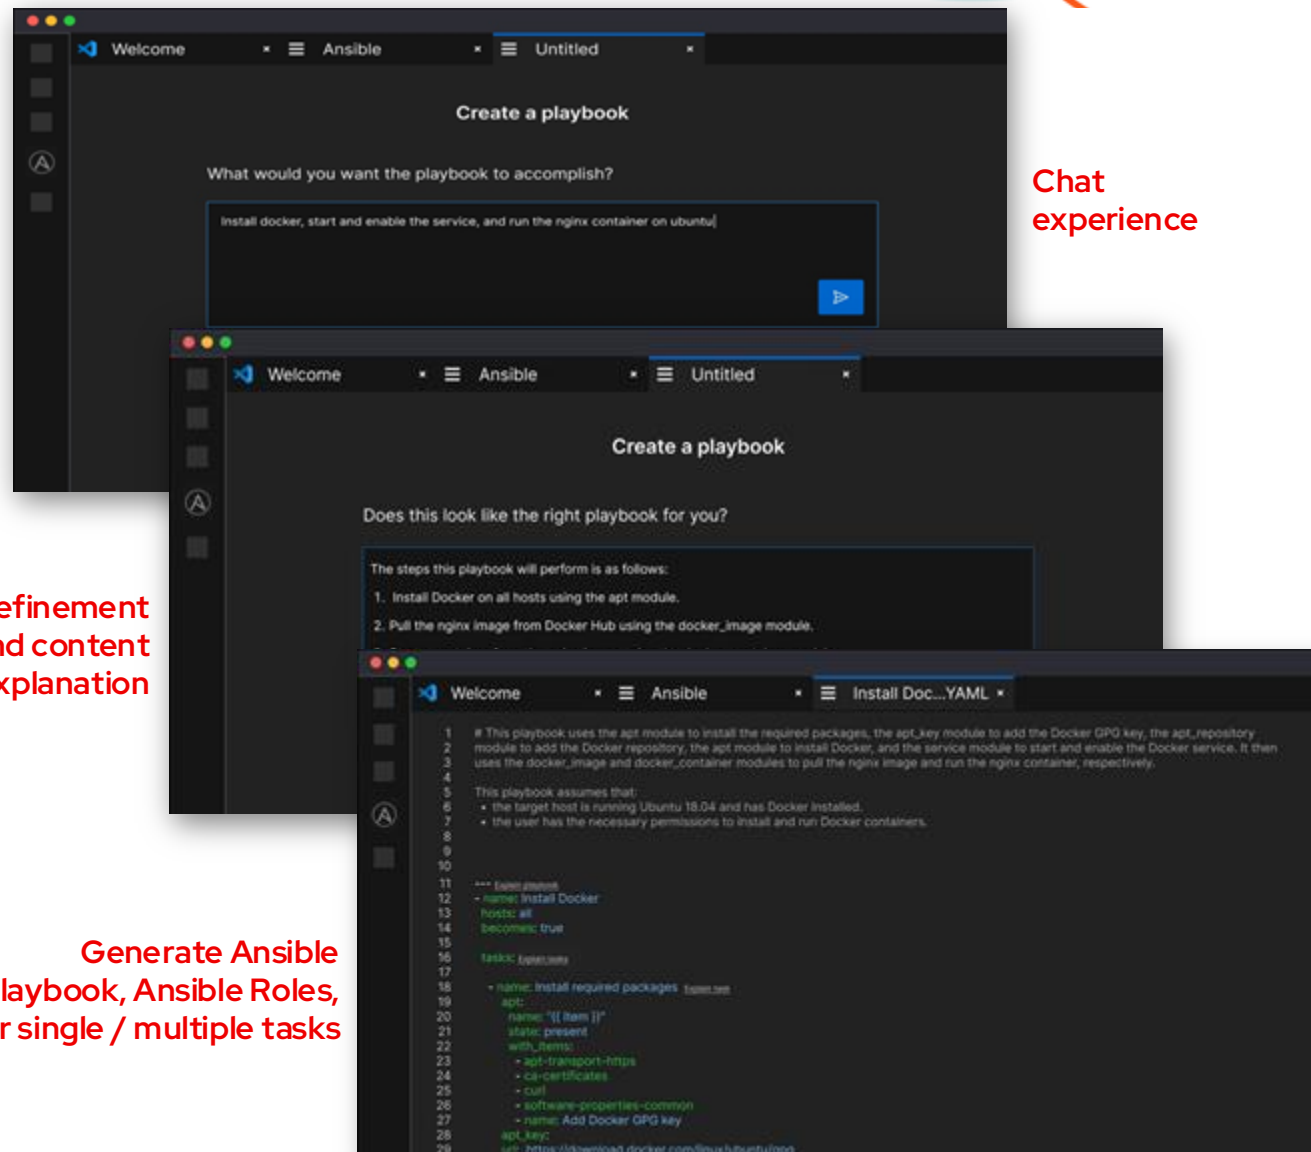

- ▶ Boost development productivity
- ▶ Democratize access to automation
- ▶ Establish trust and confidence in code
- ▶ Connect to IBM watsonx Code Assistant, powered by IBM Granite code models

Example prompts:

- ▶ "Write an Ansible Playbook to provision a VM on AWS."
- ▶ "Deploy LAMP stack on a RHEL server."
- ▶ "Show me an Ansible Playbook that will install RHEL AI"

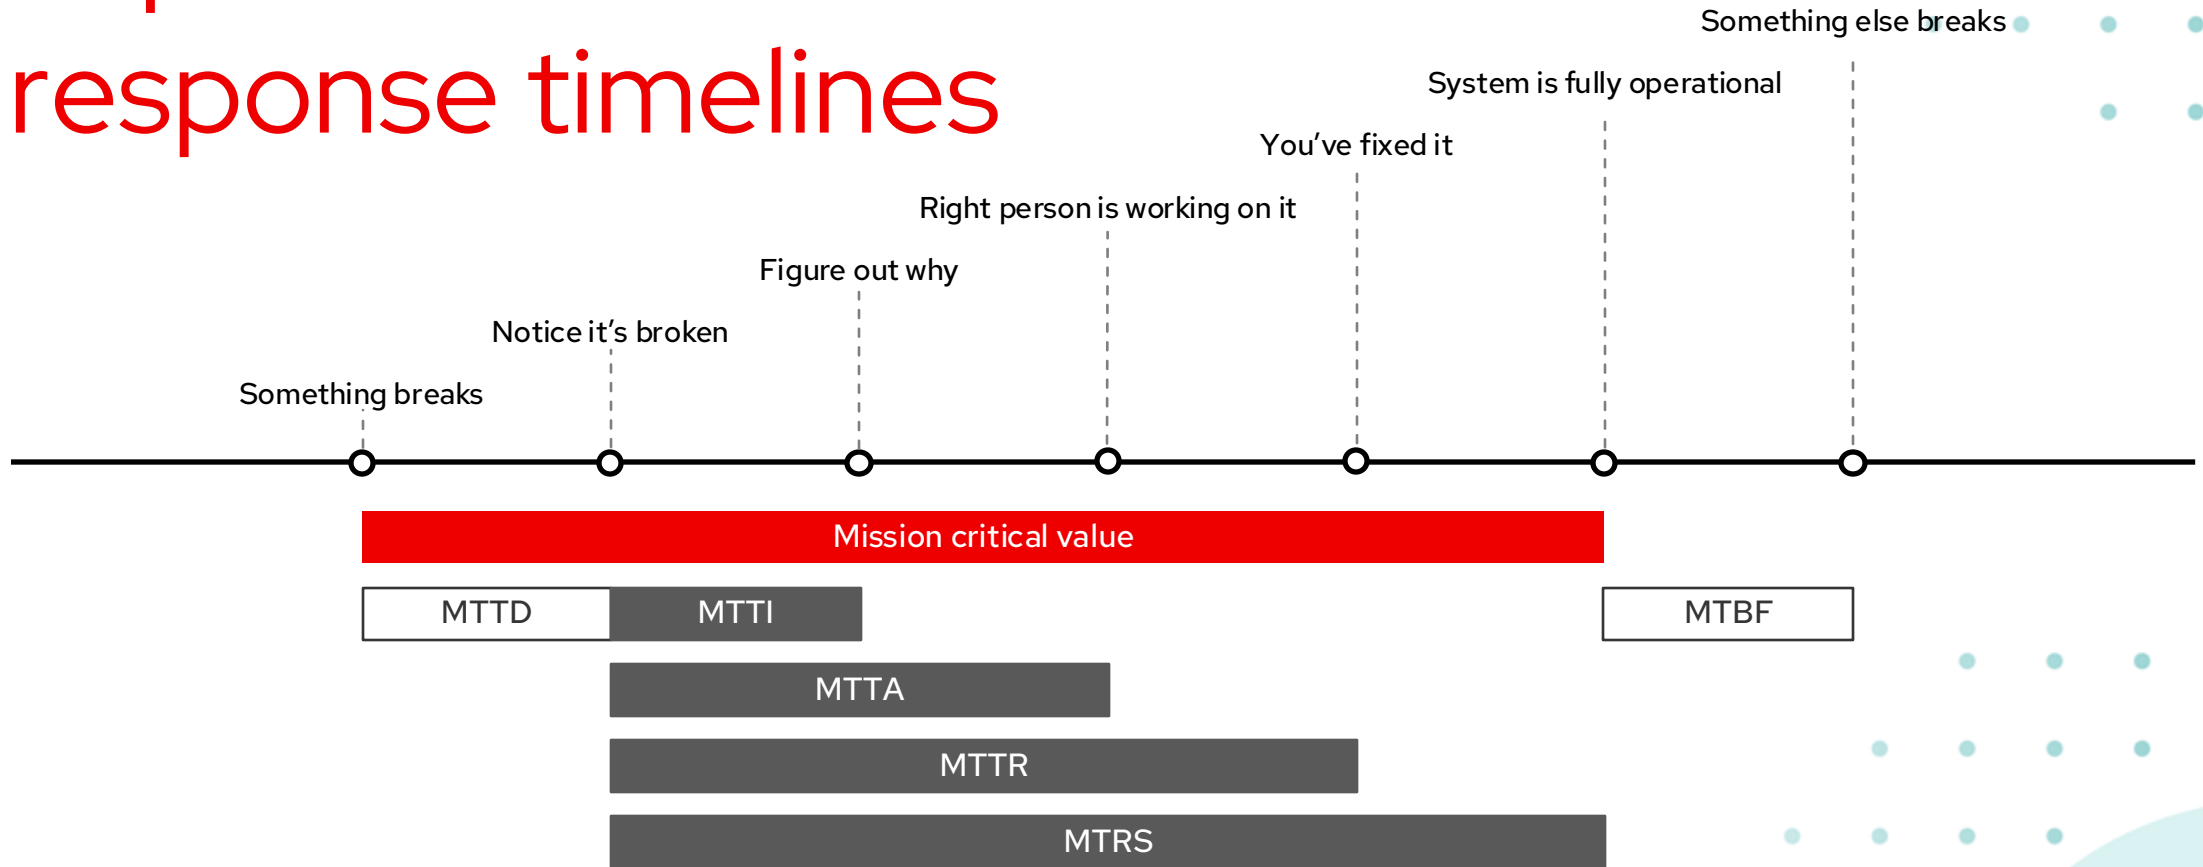

Prompt refinement  
and content  
explanation

Generate Ansible  
Playbook, Ansible Roles,  
or single / multiple tasks

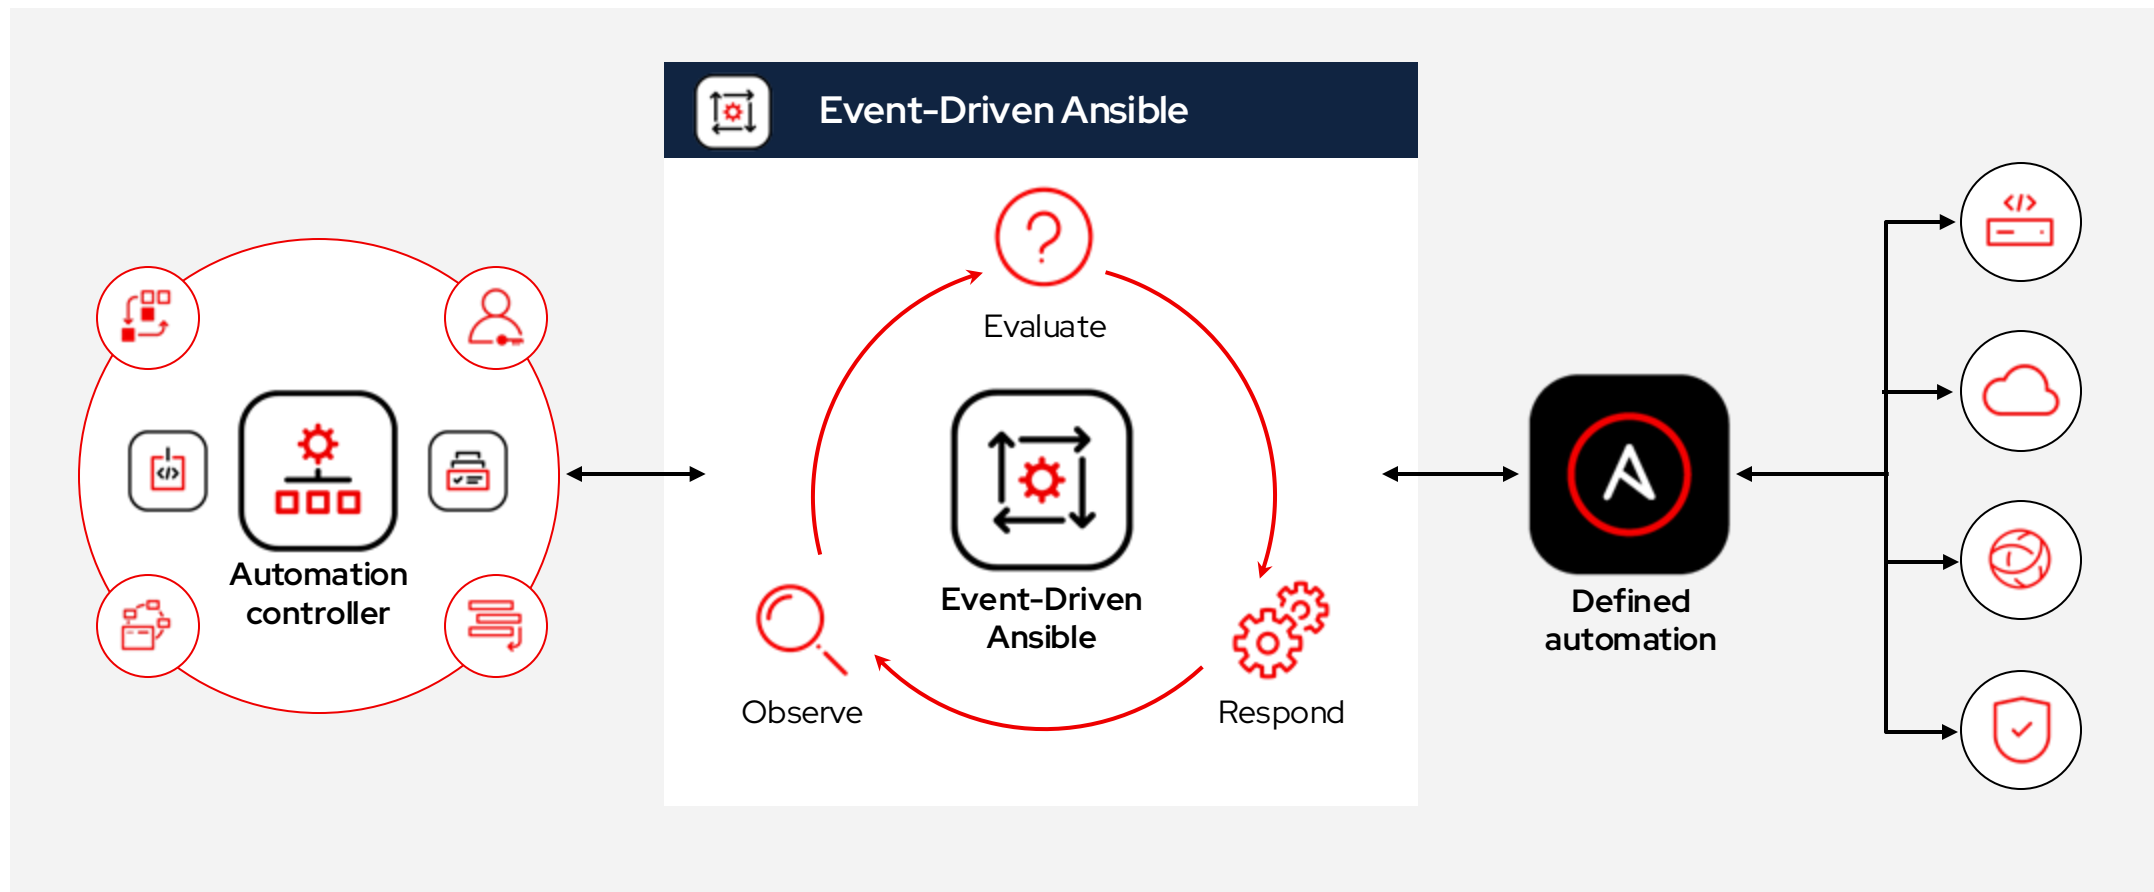

Minimize time, effort, and disruption  
for faster responses to issues on mission-critical applications

# Improve incident response timelines

MTDD: Mean Time to Detect, MTTI: Mean Time to Investigate, MTTA: Mean Time to Action, MTTR: Mean Time to Repair, MTRS: Mean Time to Restore Service, MTBF: Mean Time Between Failures, MTBSI: Mean Time Between Service Incidents

# Event-Driven Ansible. **Observe, evaluate, respond.**

Use case and tool friendly event-driven automation

## Event-Driven Ansible is partner friendly

So if I have my OpenShift cluster  
or many clusters...

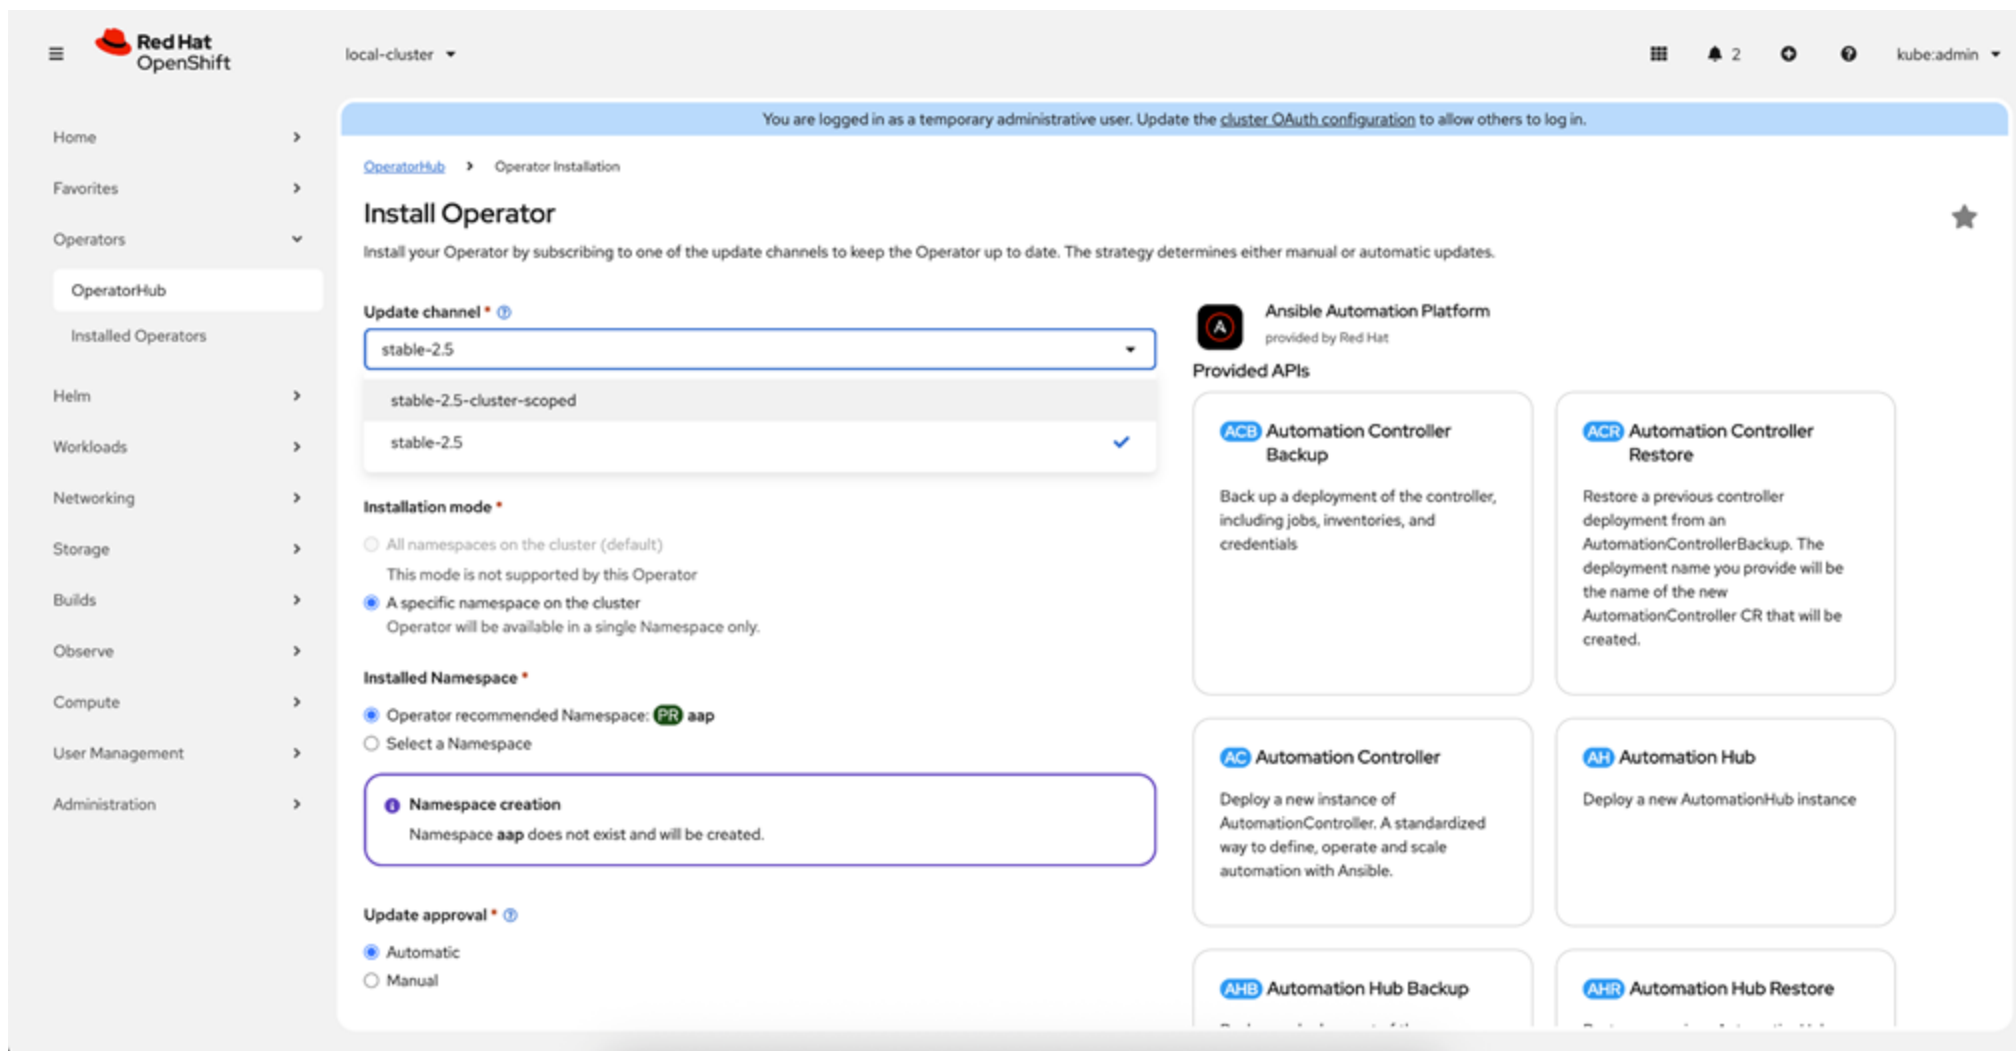

How I can play with external elements?

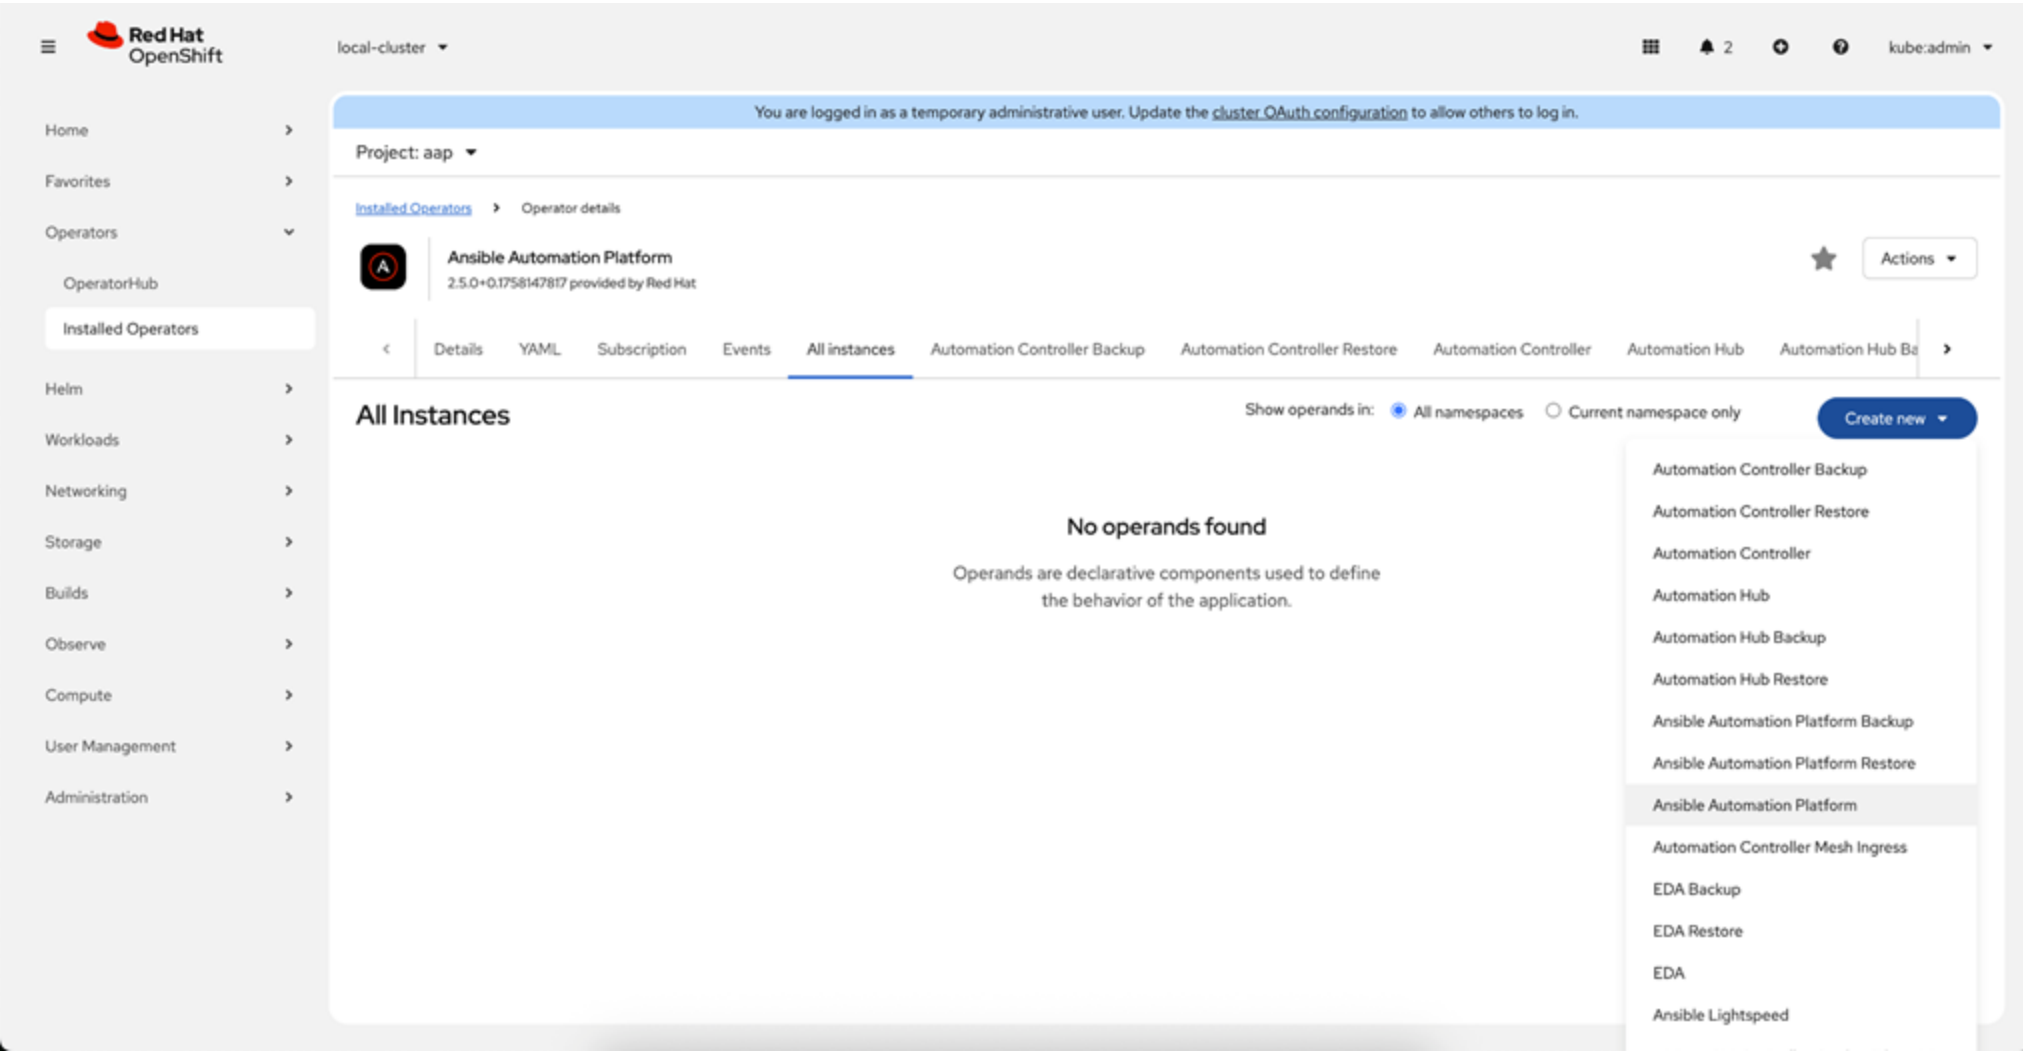

With Ansible Automation Platform maybe?

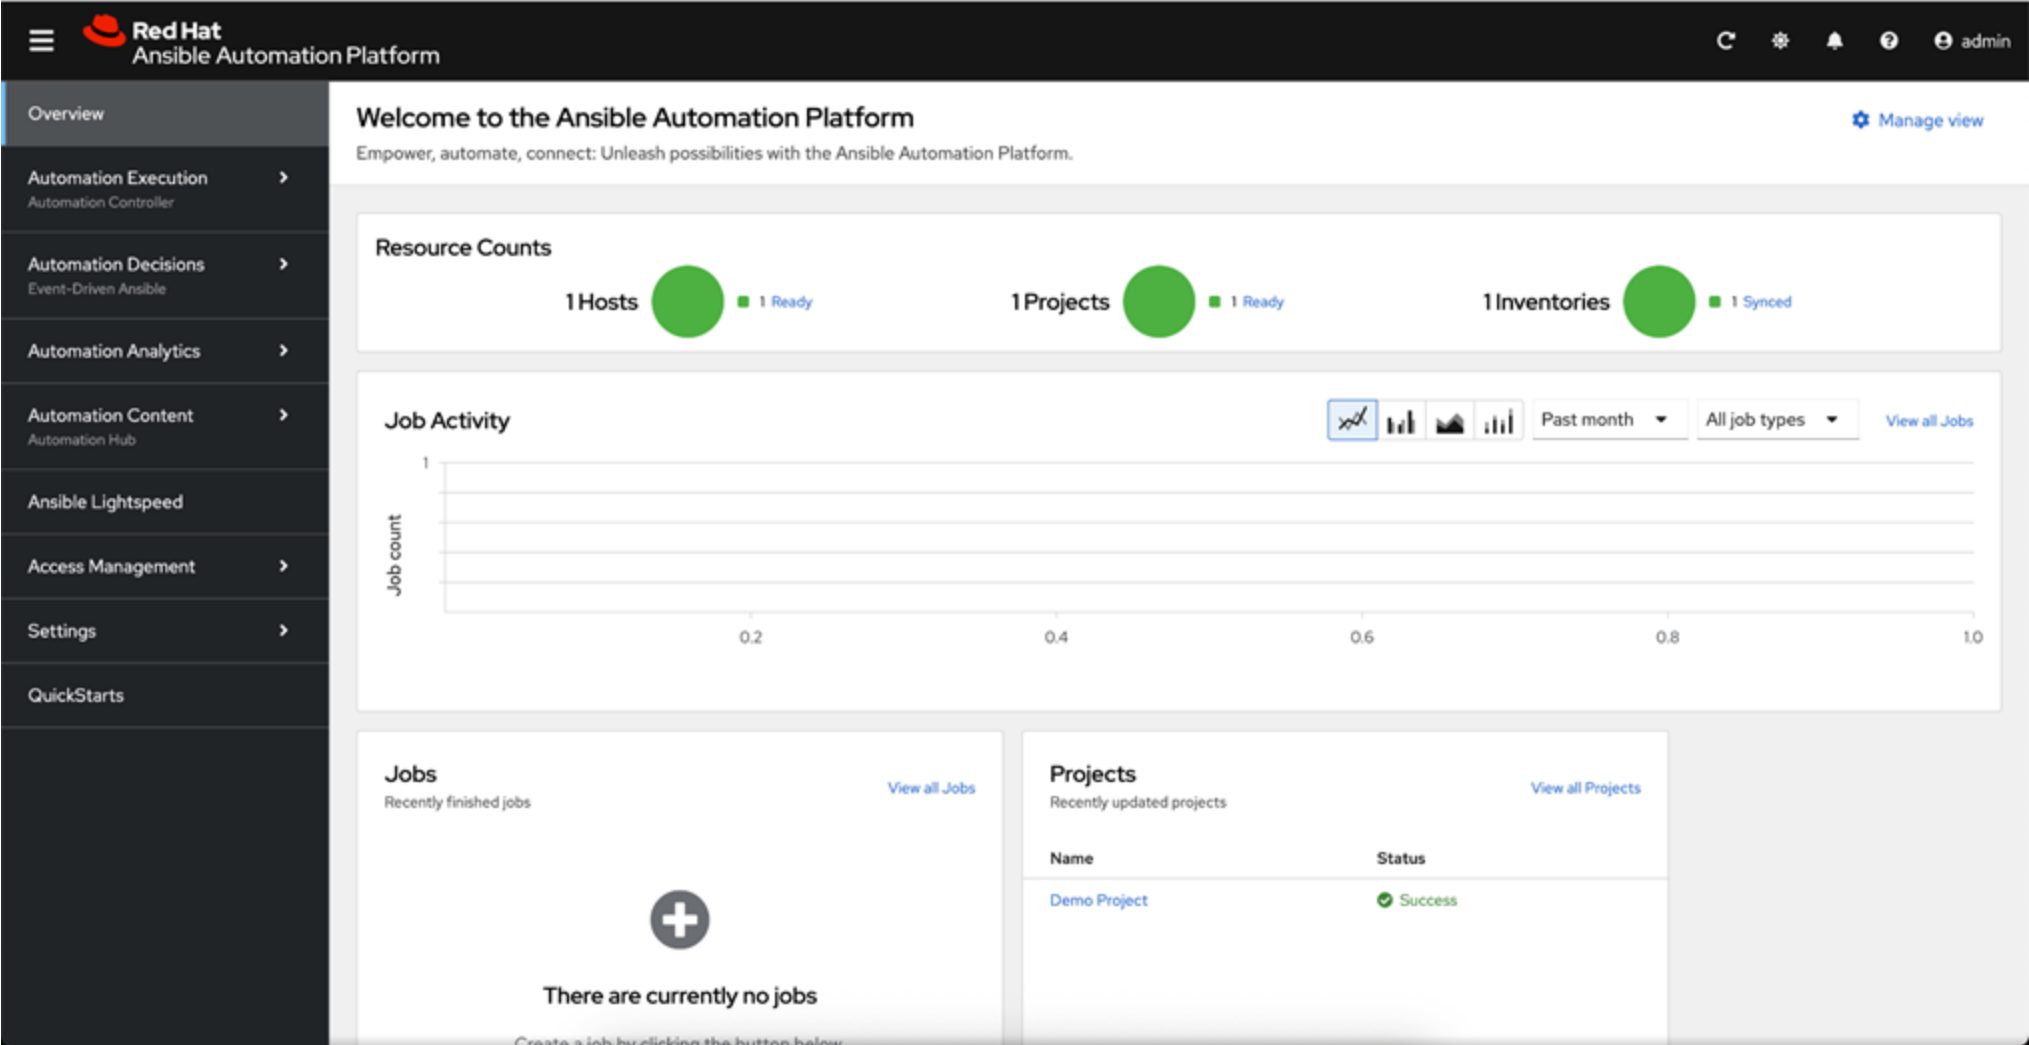

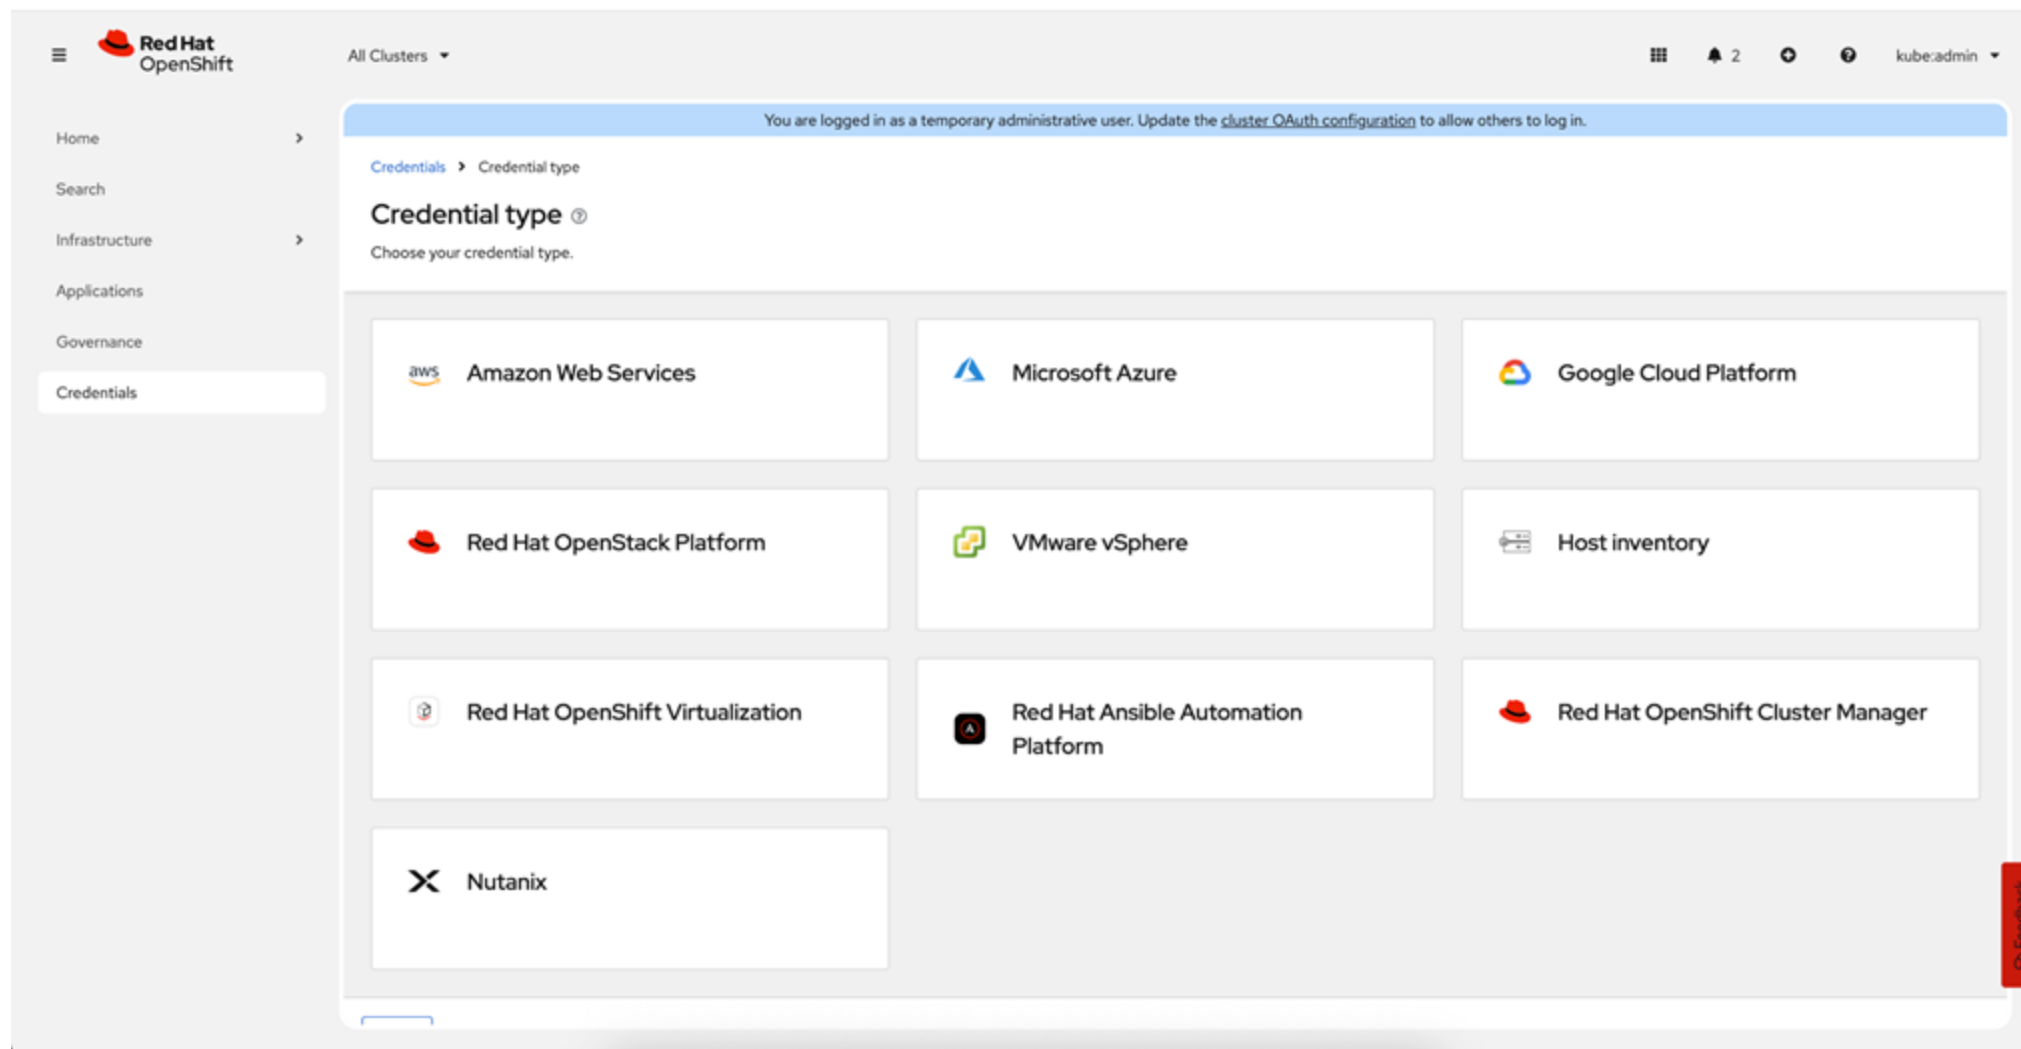

The screenshot shows a GitHub repository page for 'rhacm-ansible-aap-2.5-setup' by user 'mmartofel'. The repository is public and has 14 commits. The main branch is 'main'. The repository contains several files and folders, including 'images', '.DS\_Store', '.gitignore', '00-setup-awx-cli.sh', '01-show-aap-controller-token.sh', 'README.md', and 'dev-aap-instance.yaml'. The README file is selected and displays the title 'Red Hat Ansible Automation Platform (AAP) 2.5 integration with Red Hat Advanced Cluster Management for Kubernetes'. The README content describes how to set up the AWX CLI in a Python 3.11 virtual environment and retrieve the AAP Controller API token for use with Red Hat Advanced Cluster Management (RHACM). It also mentions prerequisites.

**Red Hat Ansible Automation Platform (AAP) 2.5 integration with Red Hat Advanced Cluster Management for Kubernetes**

This repository helps you quickly set up the AWX CLI ( `awxcli` ) in a Python 3.11 virtual environment and retrieve your AAP Controller API token for use with Red Hat Advanced Cluster Management (RHACM). It's a required step to create AAP credentials at RHACM. There are several important changes with API provided by AAP 2.4 and 2.5 . Following steps apply to 2.5 only. In addition to that it's handy to have awx CLI configured and ready to interact with your AAP 2.5 .

**Prerequisites**

The screenshot displays the Red Hat OpenShift console interface. The top navigation bar includes the Red Hat OpenShift logo, a menu icon, and the text 'All Clusters'. On the right side of the top bar, there are icons for a grid, a bell with '2' notifications, a refresh icon, a help icon, and the user 'kube:admin'. A blue banner at the top of the main content area states: 'You are logged in as a temporary administrative user. Update the [cluster OAuth configuration](#) to allow others to log in.'

The left sidebar contains a navigation menu with the following items: Home, Search, Infrastructure, Applications, Governance, and Credentials (which is highlighted). The main content area is titled 'Add credential' and includes a breadcrumb trail: 'Credentials > Credential type > Add credential'. Below the title, there is a toggle switch for 'YAML' and a description: 'A credential stores the access credentials and configuration information for creating clusters.'

The 'Add credential' form is divided into three steps: 1. Basic information (selected), 2. Ansible Automation Platform, and 3. Review. The 'Basic information' step contains the following fields:

- Credential type:** A dropdown menu with 'Red Hat Ansible Automation Platform' selected.
- Credential name:** A text input field containing 'aap-local-credential'.
- Namespace:** A text input field containing 'open-cluster-management'.

At the bottom of the form, there are three buttons: 'Next' (blue), 'Back' (light blue), and 'Cancel' (light blue). A red 'Feedback' button is located in the bottom right corner of the console interface.

The screenshot shows the Red Hat OpenShift console interface. The left sidebar contains navigation links: Home, Search, Infrastructure, Applications, Governance, and Credentials (which is highlighted). The top navigation bar shows 'All Clusters' and a user profile 'kube:admin'. A blue banner at the top of the main content area states: 'You are logged in as a temporary administrative user. Update the [cluster OAuth configuration](#) to allow others to log in.'

The main content area is titled 'Add credential' with a sub-header 'Credential type' and 'Add credential'. Below this, a toggle switch for 'YAML' is visible. A descriptive text states: 'A credential stores the access credentials and configuration information for creating clusters.'

The 'Add credential' page is divided into three steps: 1. Basic information, 2. Ansible Automation Platform (which is the current step), and 3. Review.

The 'Enter the Ansible Automation Platform credentials' section contains two input fields:

- Ansible Tower host**: A text input field containing the URL 'https://dev-aap.apps.mietek.sandbox660.opentlc.com'.
- Ansible Tower token**: A password input field with a masked token '.....'.

At the bottom of the form, there are three buttons: 'Next' (highlighted in blue), 'Back', and 'Cancel'. A red 'Feedback' button is located in the bottom right corner of the console interface.

Below the title, there is a toggle switch for 'YAML' and a descriptive text: 'A credential stores the access credentials and configuration information for creating clusters.'

The 'Add credential' process is shown in a multi-step format. On the left, a list of steps is visible: 1 Basic information, 2 Ansible Automation Platform, and 3 Review (which is the current step). The 'Review your selections' section contains the following details:

- 1 Basic information**
  - Credential type: Red Hat Ansible Automation Platform
  - Credential name: aap-local-credential
  - Namespace: open-cluster-management
- 2 Ansible Automation Platform**
  - Ansible Tower host: https://dev-aap.apps.mietek.sandbox660.opentlc.com
  - Ansible Tower token: \*\*\*\*\*

At the bottom of the form, there are three buttons: 'Add' (in blue), 'Back' (in light blue), and 'Cancel' (in light blue). A red 'Feedback' button is located in the bottom right corner of the console.

You are logged in as a temporary administrative user. Update the [cluster OAuth configuration](#) to allow others to log in.

### Credentials

☐ Search [Add credential](#) Actions
