Common Challenges

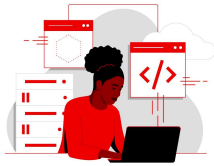
Application Modernization

80%

of enterprise technologists surveyed **plan to modernize** more than half of their legacy applications **in the next 2 years**.

Source: The Newstack

Developer Productivity



76%

of organizations say the **cognitive load is so high** that it is a **source of low productivity**. **Gartner** predicts **75%** of companies will establish platform teams for application delivery.

Source: Salesforce
Source: Gartner

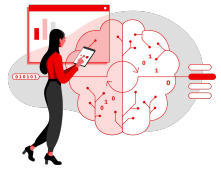
Software Supply Chain Security

742%

Average **annual increase in software supply chain attacks** over the past three years. **45%** of organizations will experience attacks. **Is a matter of when, not if.**

Source: Sonatype

Rise of Generative AI



80%

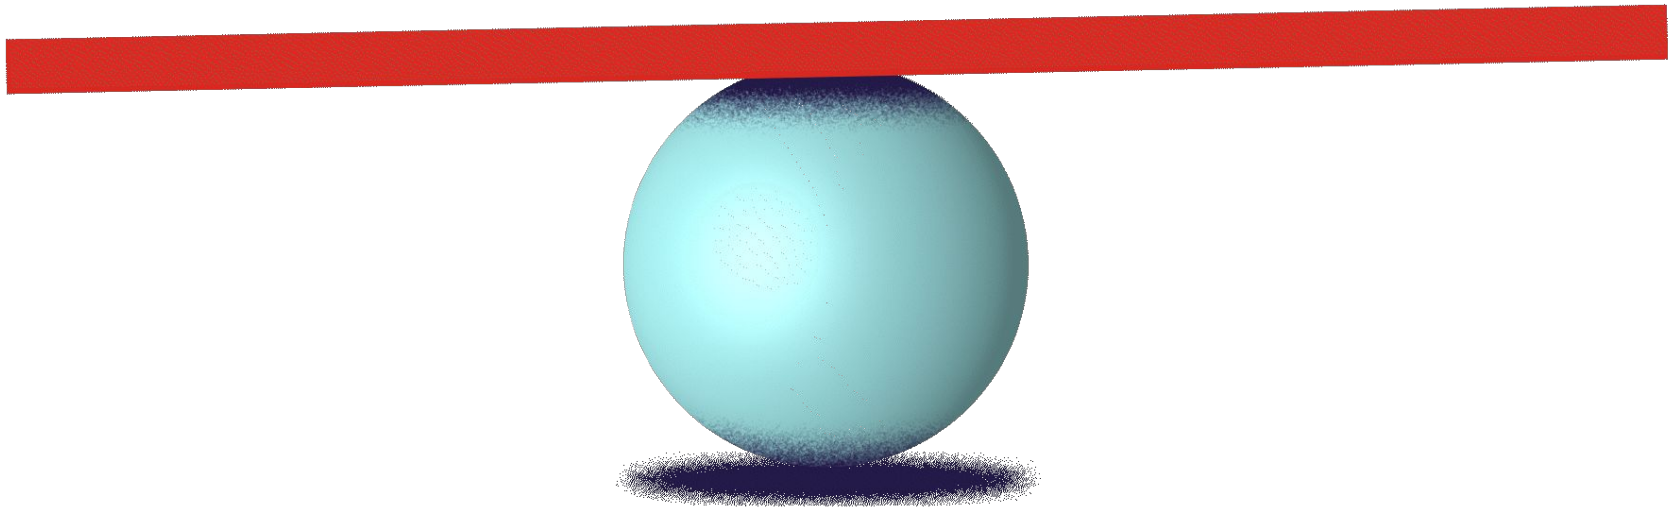
of Enterprises will have deployed **Generative AI-Enabled Applications** by 2026

Source: Gartner

The Challenge: Balancing Security & Productivity

Security

Innovation



The Challenge: Balancing Security & Productivity

Innovation

52m Average time spent by developers coding each day

76% of organizations say the cognitive load is so high that it is a source of low productivity.

80% of Enterprises will have deployed Generative AI-Enabled Applications by 2026.

Security

90% of components in modern applications utilize open source software

>500K malicious packages logged in 2024 alone, a 156% increase

$60B In estimated damages in 2025 from software supply chain attacks

Red Hat

Delivering for Developers with Platform Engineering

in a Cloud Native, AI infused world!

Gartner®

"By 2026, 80% of software engineering organizations will establish platform teams ...
A **dedicated product team** creates and maintains the engineering platform."

- Gartner

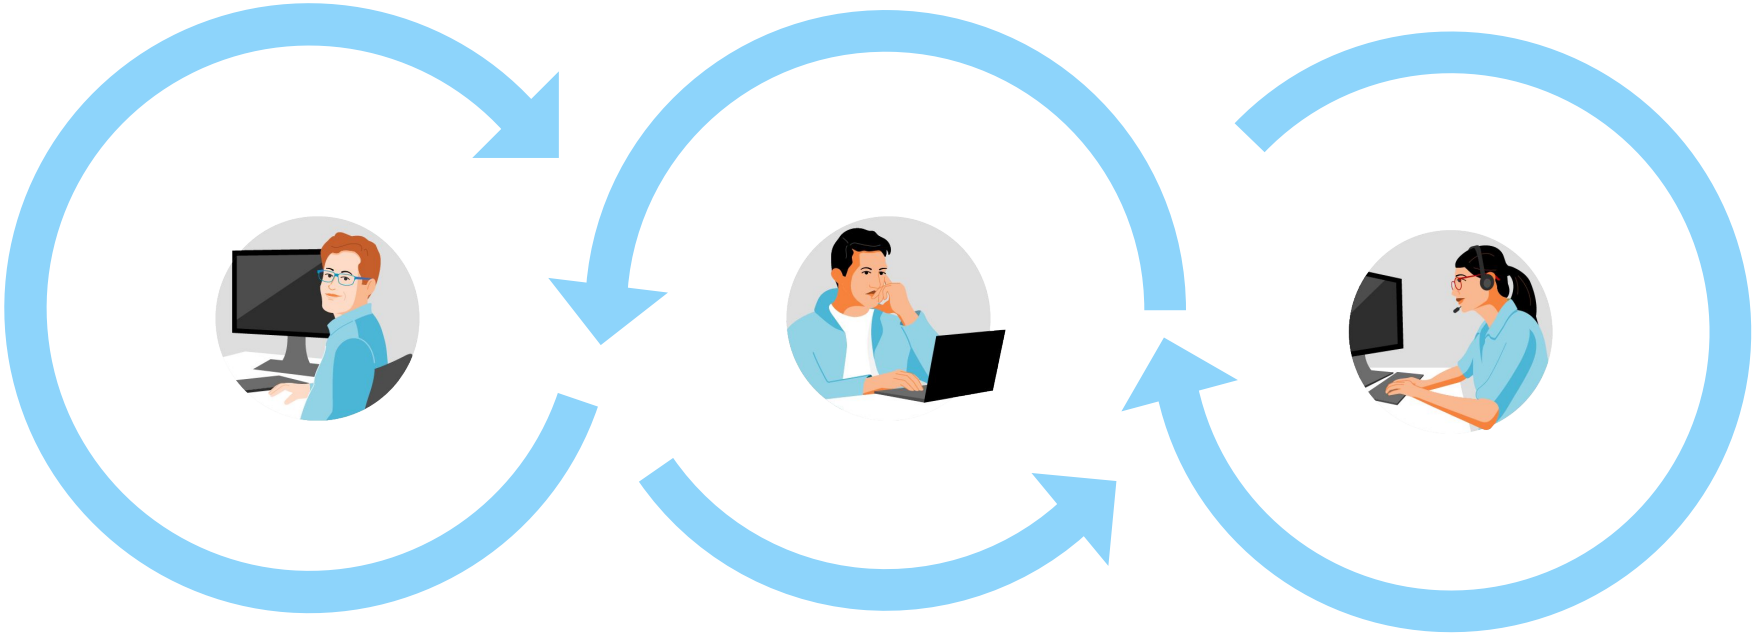
Platform engineering is the **discipline** of building and operating self-service internal developer platforms for development, build, and delivery of software systems.

Four characteristics:

- ★ **Self-Service** (e.g. Developer Portals)
- ★ **Automated** (e.g. Infrastructure as Code)
- ★ **Developer experience** (e.g. Golden Path Templates)
- ★ **Continuous improvement** (e.g. Product Mindset)

Platform Engineers play a key role in offering a standardized platform

Providing Development Teams security guardrails to efficiently create resilient software at scale



Automating security policies for compliance and regulatory

Development Teams want tools that allow them to innovate and build quickly without bottlenecks.

Platform Engineers implement requirements from Dev, Sec, and Ops via pre-approved, secure, and reusable golden paths.

Operations Teams need stability, compliance, and scalability in every environment.

Delivering for Developers with Platform Engineering

in a Cloud Native, AI infused world!

Gartner®

"By 2026, 80% of software engineering organizations will establish platform teams ...
A **dedicated product team** creates and maintains the engineering platform."

– Gartner

Platform engineering is the **discipline** of building and operating self-service internal developer platforms for development, build, and delivery of software systems.

~~Four~~ Five characteristics:

- ★ **Self-Service** (e.g. Developer Portals)
- ★ **Automated** (e.g. Infrastructure as Code)
- ★ **Developer experience** (e.g. Golden Paths)
- ★ **Continuous improvement** (e.g. Product Mindset)
- ★ **Security Guardrails** (e.g. Signing & Verification, SBOM Management)

"A **digital platform** is a foundation of self-service APIs, tools, services, knowledge and support which are arranged as a compelling internal product. "

Evan Bottcher - 2018

Move Fast, Stay Safe

Red Hat Advanced Developer Suite

Enable development teams to deliver business value faster

Create an integrated, self-serve developer experience from end to end with **Red Hat Developer Hub**

Reduce supply chain security risks across the software development lifecycle

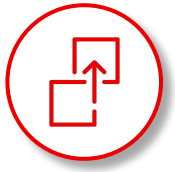
Trust, transparency across devops processes with **Red Hat Trusted Software Supply Chain**

Extend OpenShift experience to developer desktops

Containers and Kubernetes on the desktop with **Podman Desktop** and **OpenShift Local**

Standardize Developer tools

Enable application coding locally on the desktop with **IDE Plugins** and remotely in the browser with **OpenShift DevSpaces**

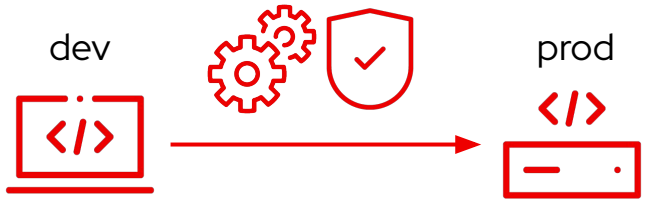


AI-Accelerated workload migration to OpenShift

Accelerates large scale migrations and modernization with **migration toolkits**

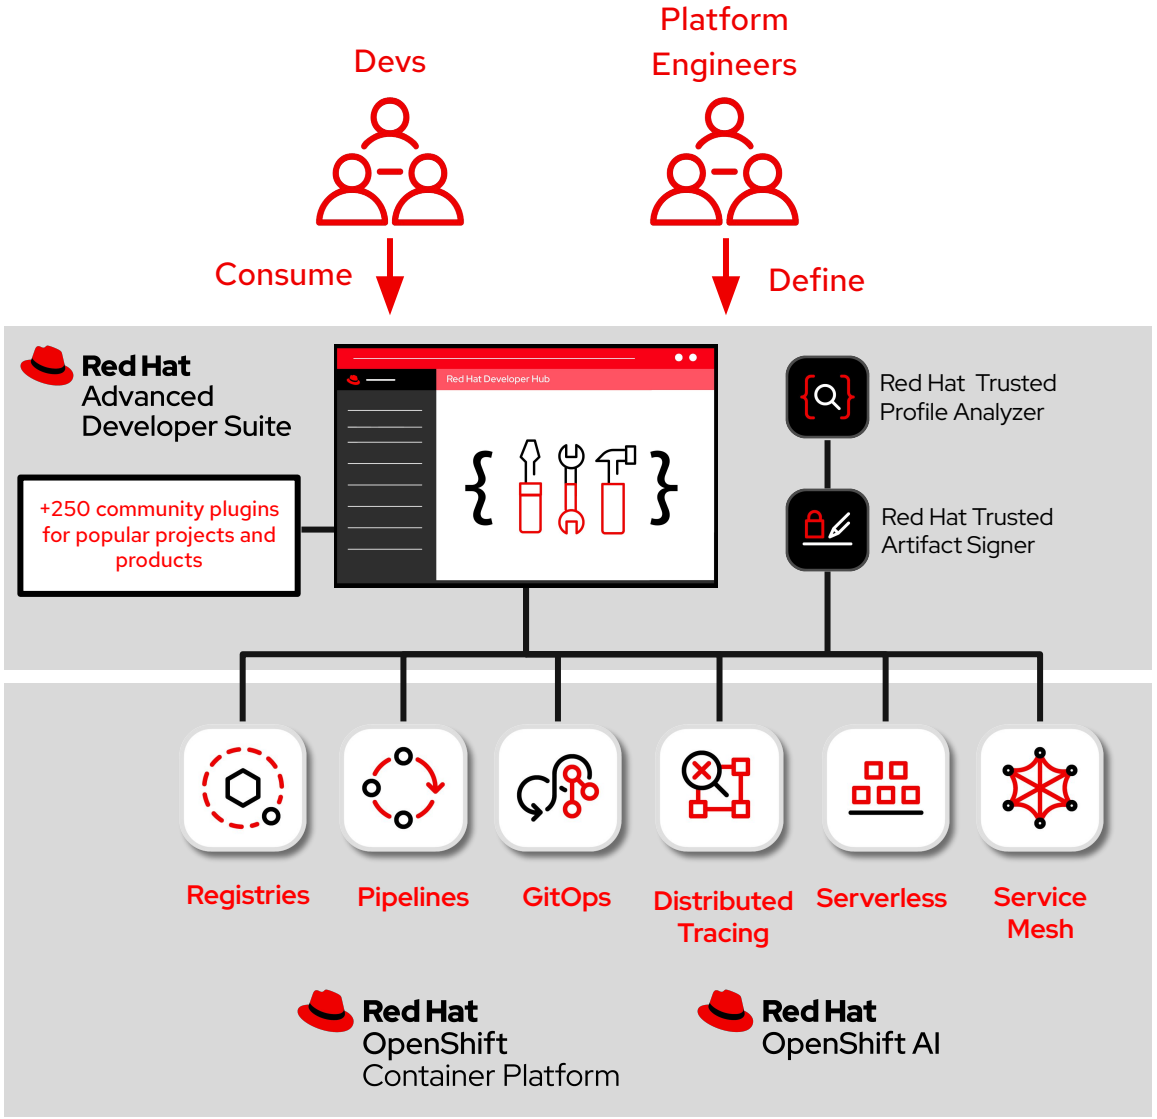
Red Hat

Red Hat Advanced Developer Suite



RHADS combines platform engineering tools with enhanced security capabilities to help accelerate and simplify application development with new enhancements to speed the adoption of AI

- Modular design allows it to be integrated with existing platforms and systems including Red Hat's platforms
- Integrates with existing security capabilities found in Red Hat Advanced Cluster Security
- Complements existing developer tools from Red Hat including OpenShift DevSpaces
- Built on leading open source projects like Backstage and Sigstore



Red Hat

Red Hat Advanced Developer Suite

IDP: Internal Developer Portal

Red Hat Developer Hub

AI/Kube Developer Desktop Experience : **Podman Desktop**

Migration toolkits

Development Tools

IDE Plugins

Red Hat OpenShift Dev Spaces

Trusted Software Supply Chain

Red Hat Trusted Artifact Signer

Red Hat Trusted Profile Analyzer

AI Enablement

Developer Lightspeed

Podman Desktop AI Lab

Red Hat Developer Hub AI Integration

Products that allow developers to **quickly and securely deliver applications to production**

Enabling platform engineers to more easily enforce operational controls and compliance across hybrid multi-cloud environments

Red Hat

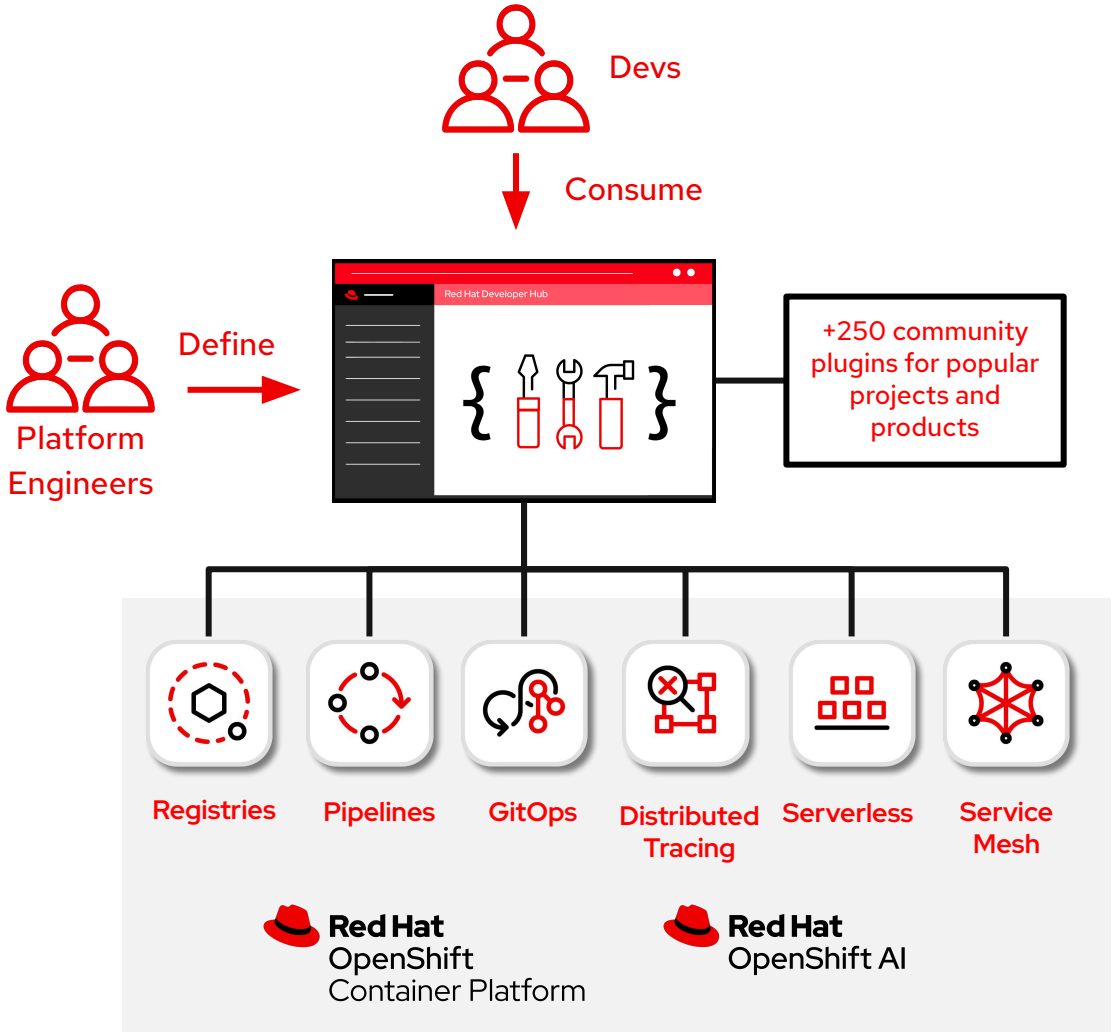
Increased Developer Productivity

Spend more time focusing on business problems

Red Hat Developer Hub provides a comprehensive and convenient view, which **reduces friction and increases efficiency** for development teams building services and applications

Red Hat Developer Hub

An Internal Developer Portal (IDP) based on the CNCF Backstage project



Increasing Developer Efficiency

Faster Onboarding & Setup: Instant onboarding with preconfigured, trusted environments, integrated services, and curated tools—all powered by cloud-based workspaces.

Streamlined Development Workflow: Automated software templates, self-services capabilities and a central source-of-truth reduce friction.

Integrated Collaboration & Flexibility: Development teams can work on local laptops while the source code stays secure, leveraging integrated tools.

Enhanced Software Supply Chain Security

Unlock a secure and compliant Software Development Lifecycle

Red Hat Trusted Artifact Signer and **Red Hat Trusted Profile Analyzer** automate software artifact signing and verification, ensuring cryptographic integrity and a trusted path to deployment. This robust foundation enables end-to-end provenance with an immutable audit trail, proactive risk monitoring, and policy-based enforcement to secure your entire software supply chain.

Secure Software Supply Chain

From Code Commit to Runtime Enforcement

Identify dependencies and recommend trusted content before coding

Provide guidance, templates, tools to catch known vulnerabilities and misconfigurations improving dev productivity, reducing cost to fix, securing the pipeline

Vulnerability Scanning

Policy Enforcement

Artifact Signing

Automate guardrails to prevent deployment of problematic code and deliver risk mitigation

Detect and respond to runtime threats with prioritized risk assessments

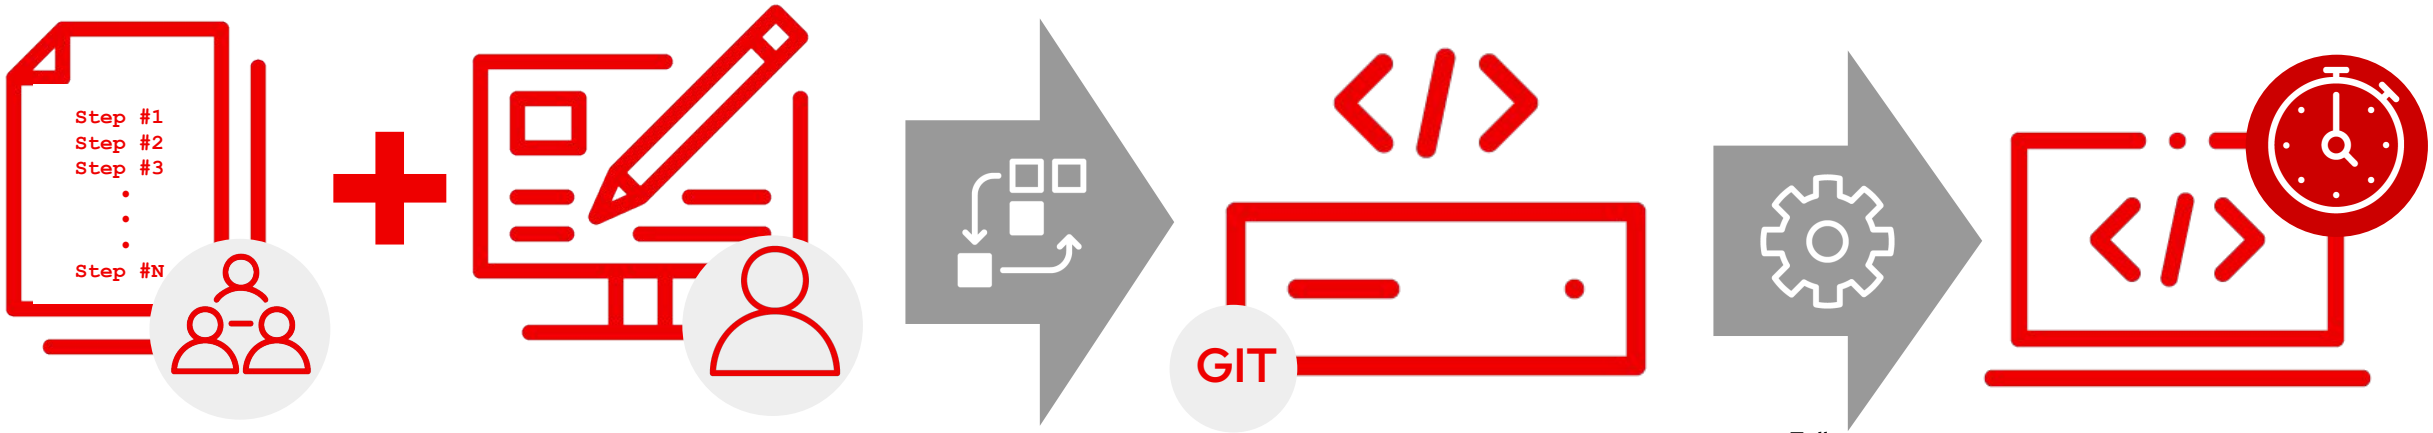
Red Hat Trusted Profile Analyzer

Red Hat Trusted Artifact Signer

Red Hat Advanced Developer Suite

Red Hat Advanced Cluster Security

Self-Service with Software Templates



Capture Your Best Practices

Codify your existing practices as Templates

Bake-in Your Processes

Use templates to automatically generate perfect projects

Generate New Projects

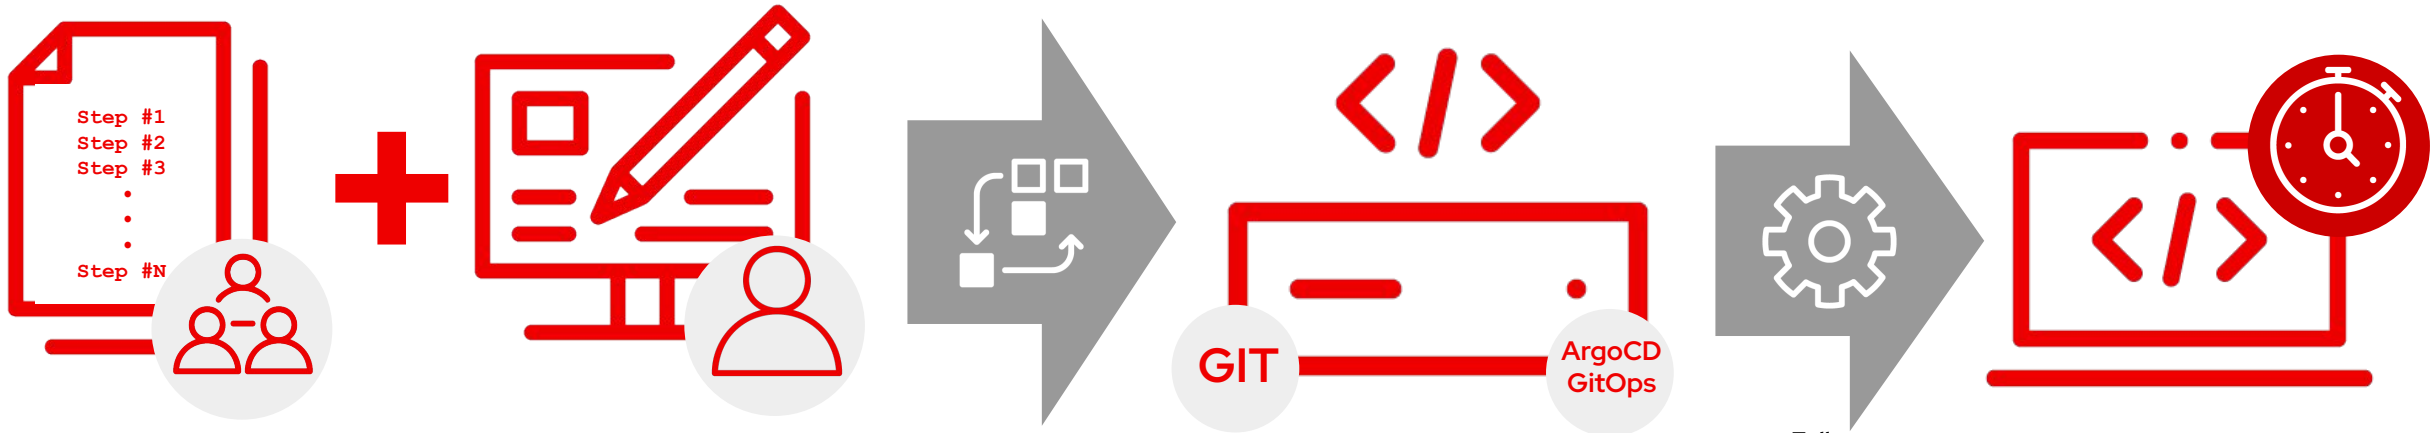
New projects go straight into version control so development can start straight away

Get Started in Seconds

No more tickets. No more Unzip.
No more search & replace.
No more Copy & Paste

Red Hat

Self-Service with Security Augmented Software Templates



Capture Your Best Practices

Codify your existing practices as Templates

Bake-in Your Processes and Security Guardrails

Use templates to automatically generate perfect projects

Generate New Projects & Pipelines

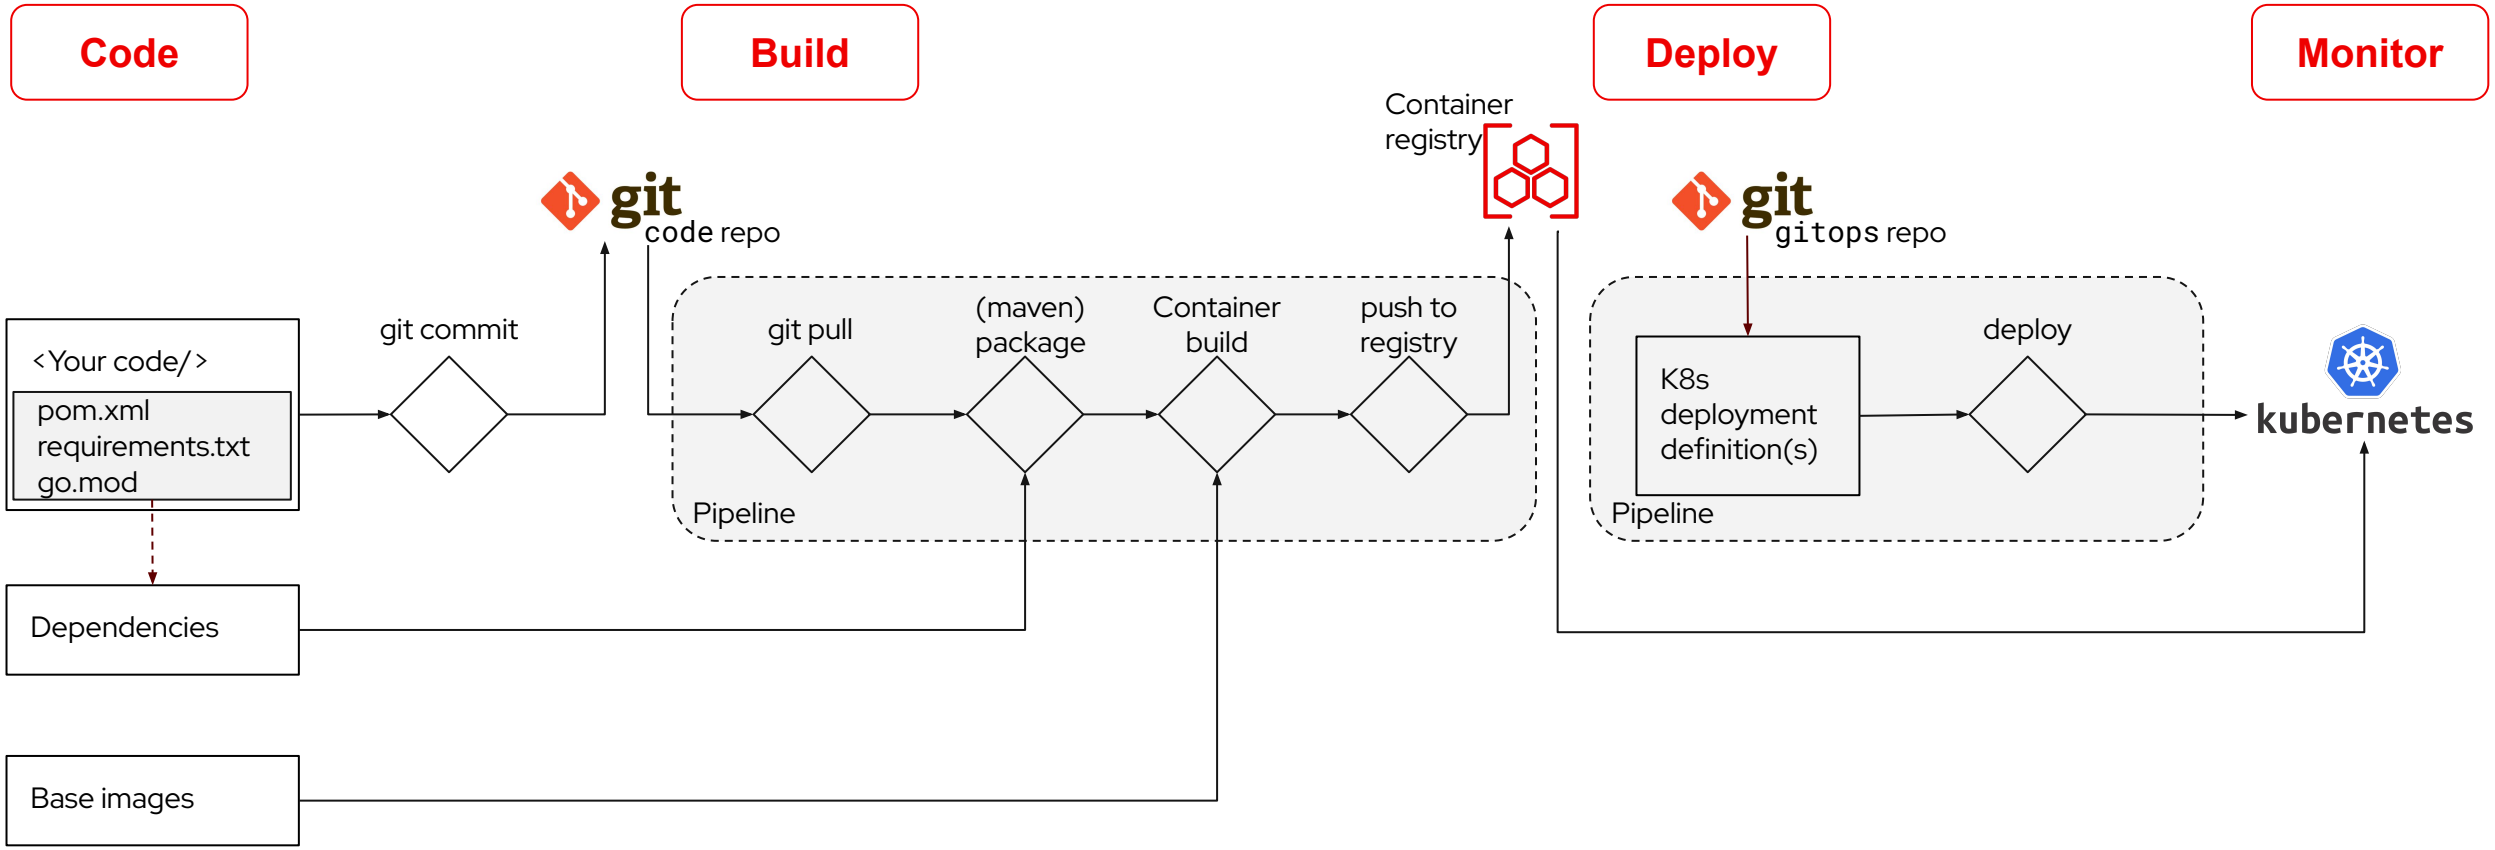
New projects go straight into version control so development can start straight away

Get Started in Seconds

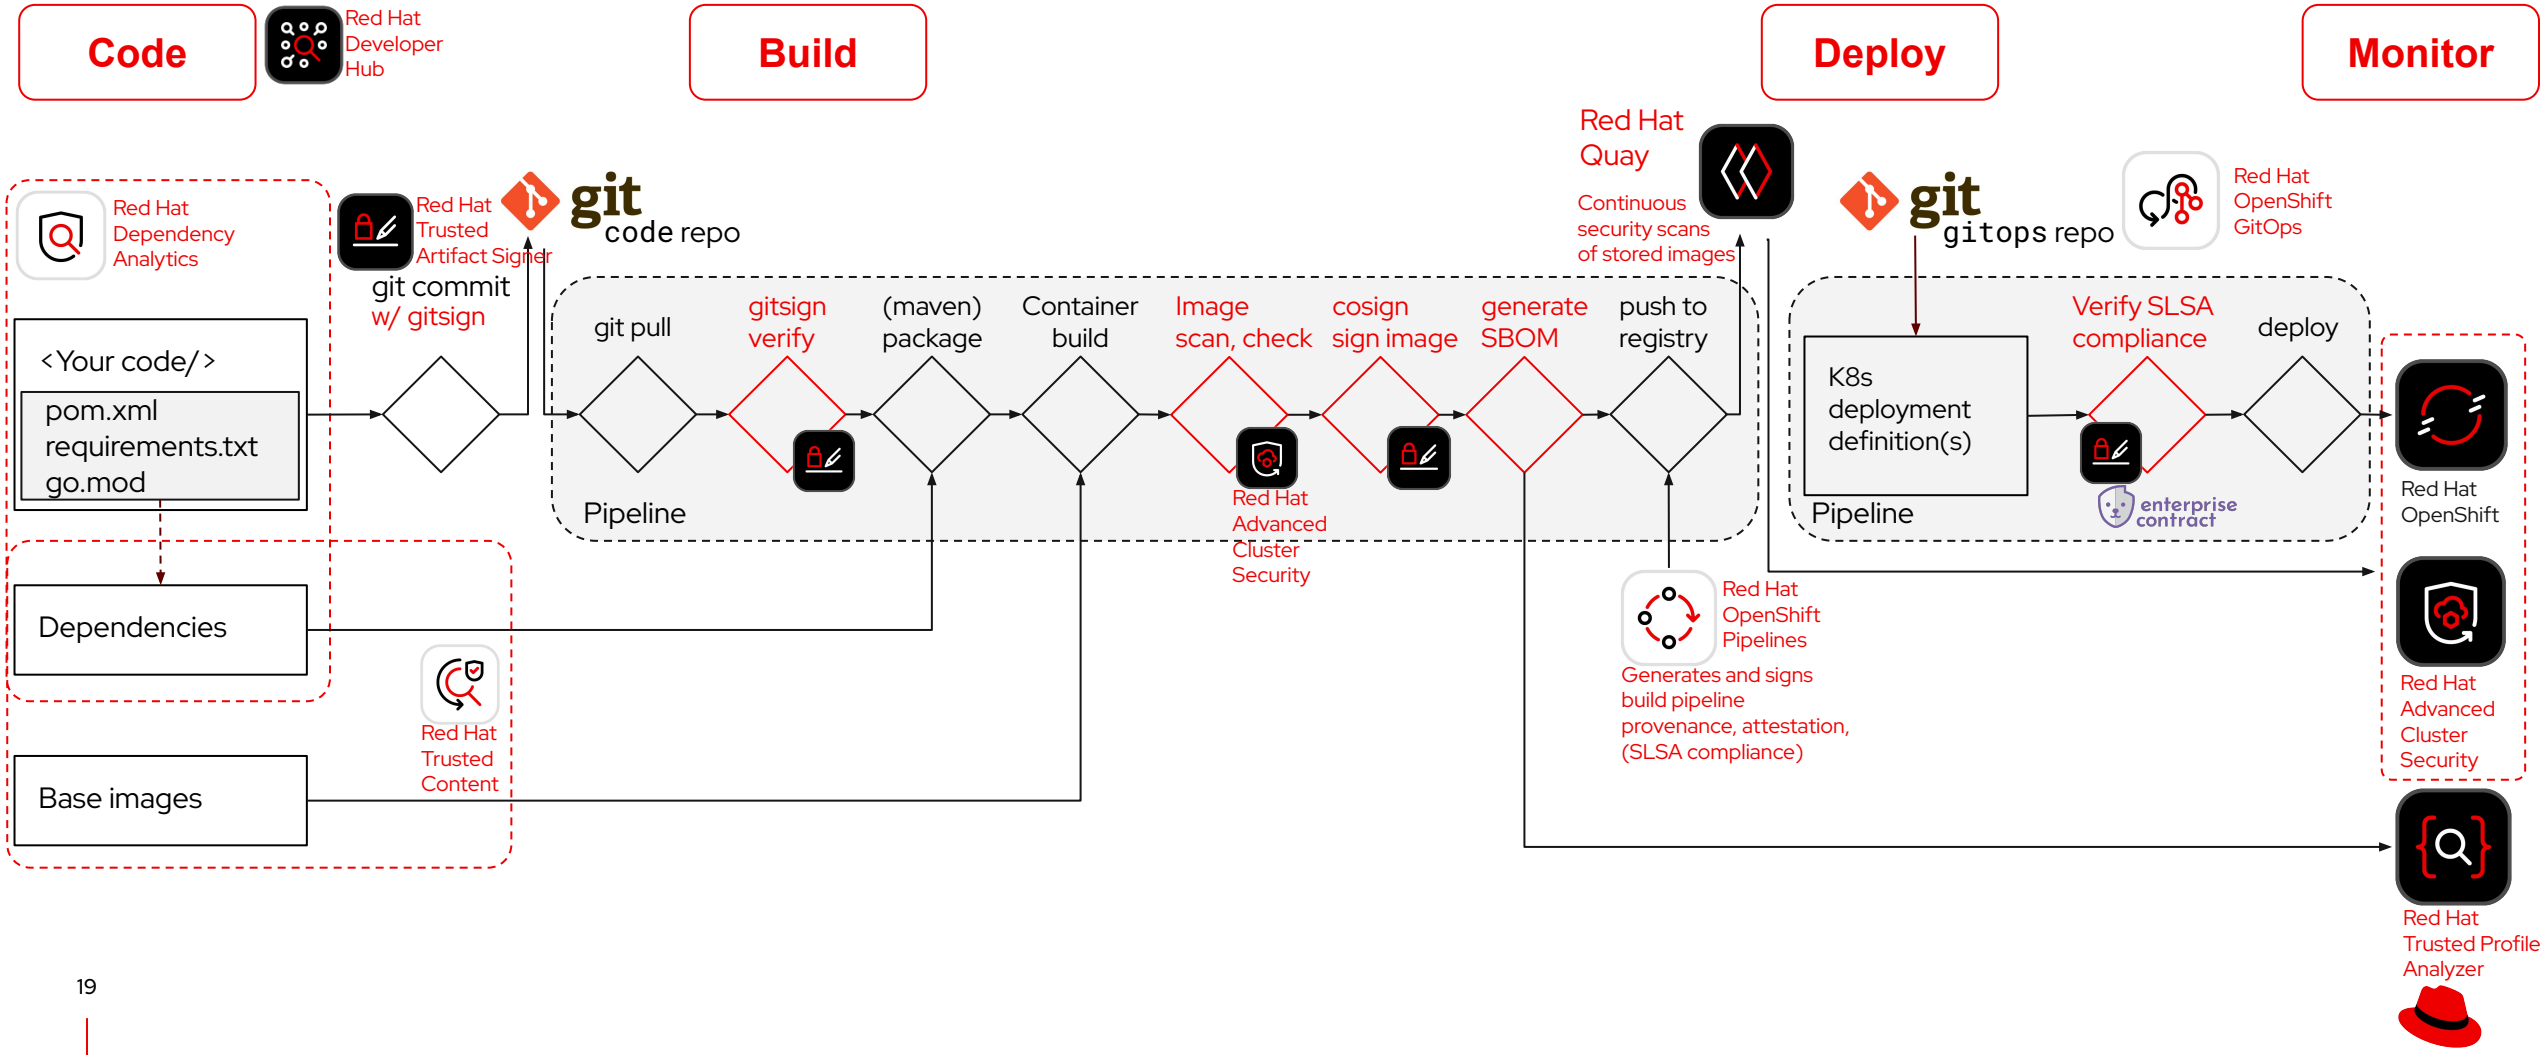
No more tickets. No more Unzip.
No more search & replace.
No more Copy & Paste

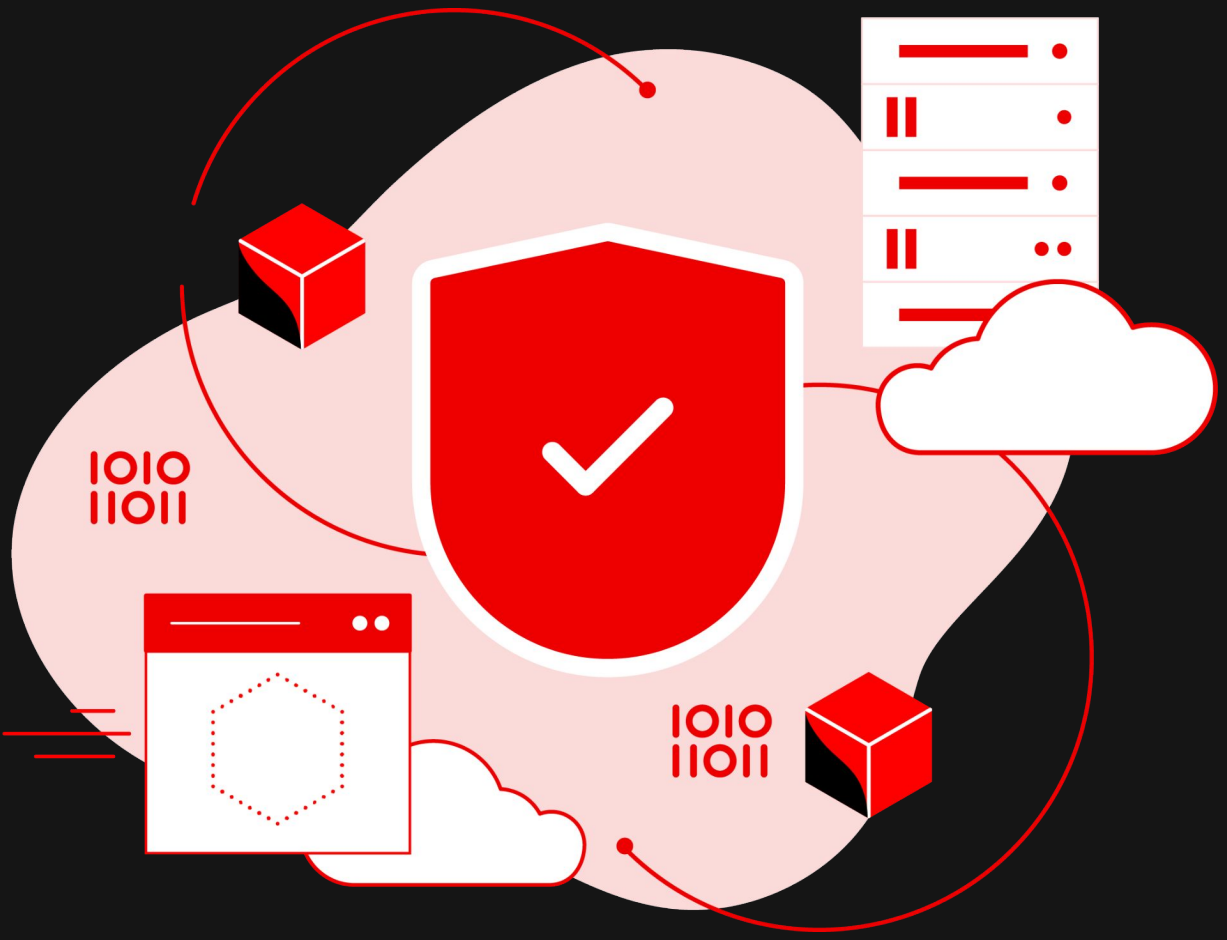
Red Hat

A generic development process



A security-augmented development process

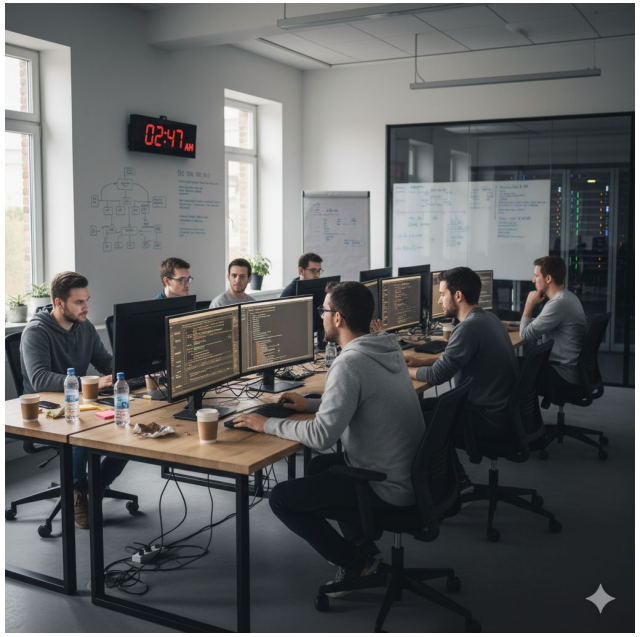




What does it look like?
Demo time!

Roadshows for deeper dive lab experience

Platform Engineering Roadshow



Typically 1-1.5 days with lots of room for questions

OpenShift Security Roadshow

Red Hat Summit
