

Welcome!

DATA SOVEREIGNTY IS BUILT, NOT BOUGHT

Why sovereignty is an architectural
decision, not a purchasing one.

Aarno Aukia

Data Has Gravity

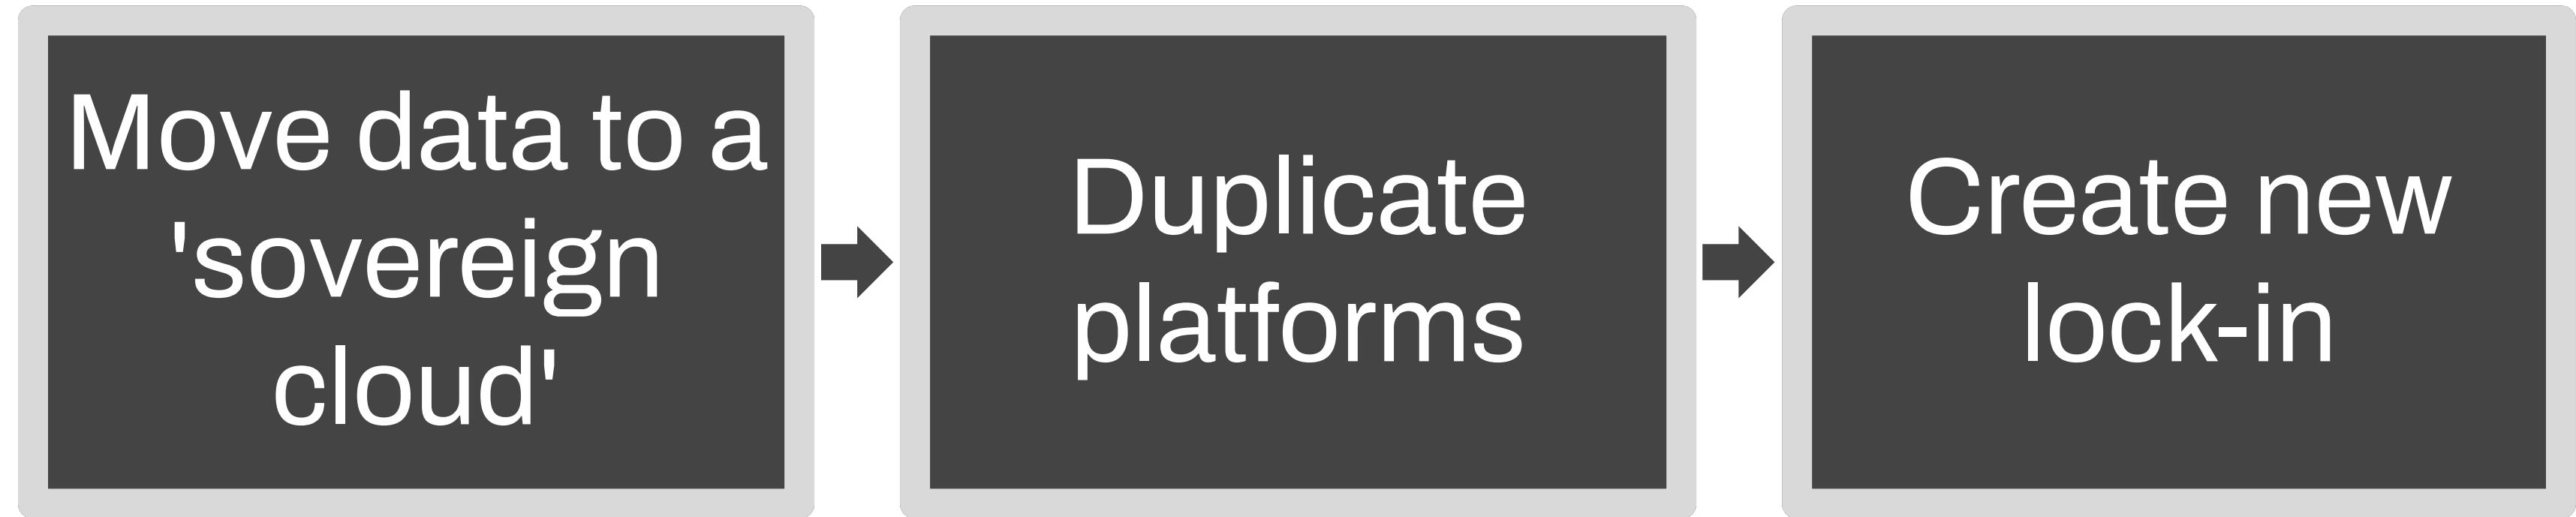

Data already
lives on-prem
or in private
cloud

Regulations
and latency
prevent easy
movement

Developers
still expect
self-service

The Common Mistake

The Architectural Shift

Keep data
where it is

Standardize
service
consumption

OpenShift as
the control
plane

Introducing Servala

- Sovereign service hub for OpenShift
- Self-service managed services
- Runs where the data lives

The image shows the Servala app store interface. At the top, the Servala logo is displayed with the text "SERVALA" and "The Sovereign App Store". Below this, a menu bar includes "Package // List // Deploy // Lifecycle". The main area displays a grid of service icons, including PostgreSQL, OpenShift, MySQL, MariaDB, Kafka, Codey, Minio, MySQL, OpenSearch, Redis, and Nextcloud. Below the grid, there are three categories: "Enterprise Clouds" (represented by a building icon), "Cloud Providers" (represented by a cloud icon), and "Consulting Partner Ecosystem" (represented by a lightbulb icon with the text "Your Service Here!").

SERVALA

Package // List // Deploy // Lifecycle

PostgreSQL OpenShift MySQL MariaDB Kafka Codey

Minio Powered by MySQL OpenSearch Redis Nextcloud

Enterprise Clouds Cloud Providers Consulting Partner Ecosystem

Your Service Here!

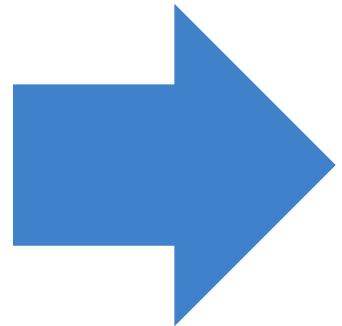

what This Enables

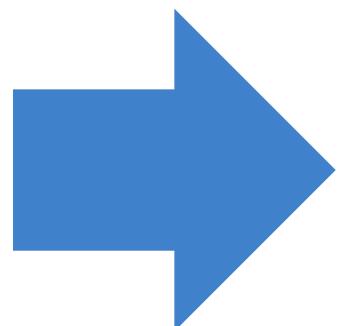

- Compliance by design 
- Infrastructure freedom 
- Consistent developer experience 

Sovereignty Is a Platform Outcome

Architecture enforces sovereignty every day

Let's continue the conversation at the VSHN booth
